Web Scraping in Support of the Census Bureau's Public Sector Programs

Federal Committee on Statistical Methodology Research and Policy Conference
Washington, DC
October 27, 2022

Hector Ferronato^{1,2} and Brian Dumbacher¹

¹U.S. Census Bureau

²Reveal Global Consulting

Outline

- Introduction
- Scraping Assisted by Learning (SABLE)
- Quarterly Summary of State and Local Tax Revenue (QTAX)
- State Government Finances (STATEFIN)
- Conclusions and Future Work

Introduction

- The Economic Directorate of the U.S. Census Bureau conducts various surveys of state and local governments
- Respondent data can often be found on government websites in the form of PDF and EXCEL reports.
- Automated data collection from these websites can reduce burden for both respondents and Census Bureau analysts.

SABLE

Firewall

External public website

QTAX

- QTAX collects quarterly tax revenue data from all state and local governments.
- Much of this tax revenue data is publicly available on government websites on monthly basis.
- Lack of standardization of URLs and report formats
- Using SABLE to automate the data collection

QTAX Downloading Option 1: URL Patterns

- The analysts determine what PDFs to download for each state, and the researchers then propose candidate URLs that are functions of the user-specified year and month. These functions are referred to as URL patterns.
 - https://aoa.vermont.gov/sites/aoa/files/revenueeconomy/RevenueRpts/DECEMBER%20-%20FY20%20Revenue%20Press%20Release%201-24-20.pdf

QTAX Downloading Option 2: Archive Page

- Identify the main archive page that the state uses to publish the tax reports. In this case the Python program visits the archive and searches for the report URL.
- Download with WGET.

QTAX Scraping

- Analysts tell the researchers what taxes to scrape for each state. The researchers then develop a template that takes the TXT version of the PDF as input and scrapes the following data:
 - Tax names
 - Tax values
 - Time period (e.g., monthly, or fiscal year to date)
 - Units (e.g., dollars or thousands of dollars)

STATE OF MAINE Undedicated Revenues - General Fund For the Fourth Month Ended October 31, 2019 For the Fiscal Year Ending June 30, 2020 Comparison to Budget										
	Actual	Budget								
Sales and Use Tax	\$ 149,179,583	\$ 144,864,644								
Service Provider Tax	4,472,832	5,108,226								
Individual Income Tax	145,540,731	146,057,541								
Corporate Income Tax	9,790,420	10,000,000								
Cigarette and Tobacco Tax	14,689,073	13,373,708								
Insurance Companies Tax	8,959,727	8,800,287								
Estate Tax	3,112,229	208,414								

QTAX Scraping: Regex Examples

```
m_col = re.search(r"(actual|budget)\s+(budget|actual)", line)
if m_col:
    if m_col.group(1) == "budget" and m_col.group(2) == "actual":
        col = 2
    elif m_col.group(1) == "actual" and m_col.group(2) == "budget":
        col = 1
```

```
m = re.search(r"estate\s+tax\s+\$?\s* ([\d,.()]+)\\s+\$?\s* ([\d,.()]+)",
line)
```

QTAX Results

STATEFIN

- STATEFIN collects a wealth of data on state finances:
 - revenue by source, expenditures by function, debt by term, and assets by purpose
- Some states provide this data in PDFs published on their websites on a yearly basis.
- The Census Bureau is prototyping using SABLE for web scraping two California state finance reports:
 - Legislative, Judicial, and Executive section of the Governor's Budget (report 0010)
 - Business, Consumer Services, and Housing Agency (report 1000)

STATEFIN Downloading

- Each of the State
 Agencies in the
 Budget Detail
 section publishes
 a PDF report of
 the entire
 agency's budget.
- Currently, analysts manually download these reports.

122 labeled objects scraped

STATEFIN Results

- 122 out of 122 (100%) labeled objects were scraped from report 1000
- 193 out of 306 (63%) labeled objects were scraped for report 0010
- These results indicate the scraping program needs to be more flexible in order to find the remaining objects and collect their values.
- Overall, these are positive results for automatic scraping the dollar values for each combination of department, program, and object.

Conclusions

- The QTAX project involves scraping a relatively small number of tax revenue items from 26 different state government websites and reports.
- The **STATEFIN** prototype involves **scraping many financial items from a limited number of documents** on the California state government website.
- Results so far for both QTAX and STATEFIN are positive. The downloading and scraping methodologies can handle inconsistencies in URLs and document layouts.
- Refinement is needed, but progress has been made towards automating a substantial portion of what used to be manual work.

Future Work

- Based on the encouraging results obtained so far for QTAX and STATEFIN, there is also potential in applying similar methodology to other public sector surveys. For example, other surveys of state and local governments collect data on public retirement systems and employment and payroll.
- Lastly, to be transparent with respondents and the greater public, there are
 plans to update the publicly available SABLE GitHub repository with the
 most recent Python code. This repository is located at
 https://github.com/uscensusbureau/SABLE and received its last major
 update after the initial PDF methods for QTAX were developed.
